

Project 1

Interpret a Data Visualization

The purpose of this report is to provide three (3) insights, based on the dashboard 'LinkedIn Top Skills for 2016'

Insight 1

With a mean of 8.5, the demand for *Web Architecture & Development Framework* is lowest in North America, far below the Global average of 3.

Using this dashboard, I highlighted both the columns for the United States and Canada, along with the top skills Globally for comparison.

:: #Awesome : pointing out the dashboard you are using

:: #Awesome : making your insights in points aka. insight 1, insight 2 , insight 3 ....etc

:: #Awesome : stating how you reached the data from the dashboard as required

#Suggestion: you have selected (rows) not columns, always double check your report

Insight 2

Out of the Top 10 Skills in Germany, only **3** appear in the global rankings, the lowest for all the countries reported, however, **all 3 are**  $\geq$  the global average.

:: #Suggestion : Please consider adding a descriptive heading for each insight. That way I will get a heads up on what you're going to talk about. It will make your report more clear.

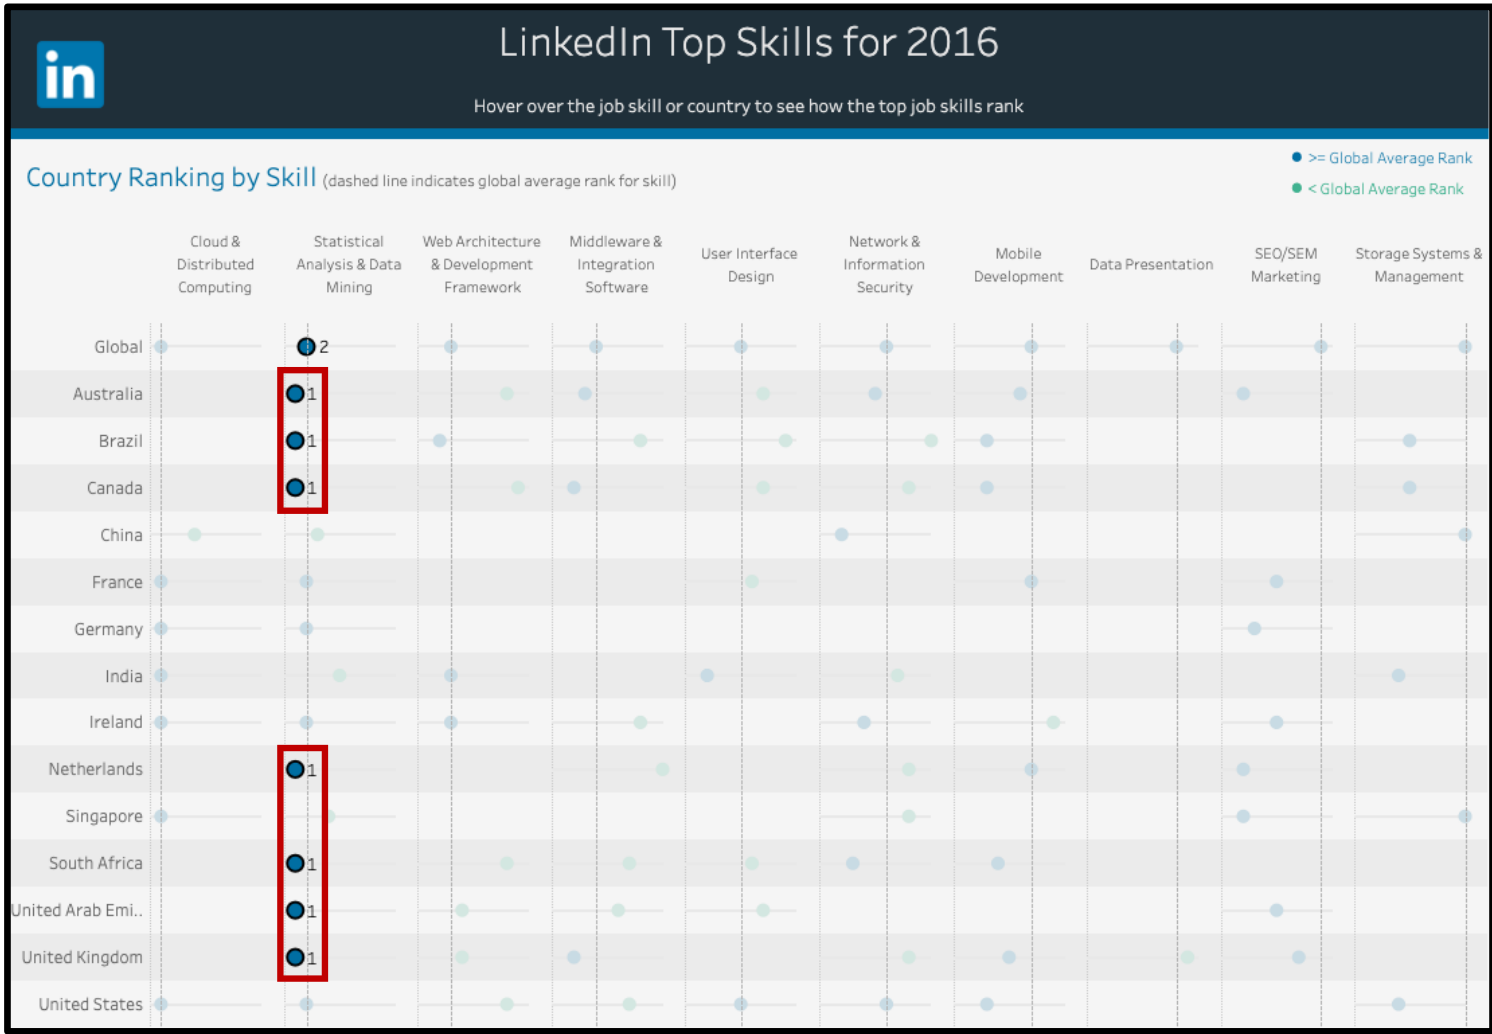

:: #Awesome : supporting your insight with the right screenshot of the data

I totaled up the quantity of global rankings for all countries, and, using the dashboard functions to sort the row by rank broken down by Germany, found that my insight is correct.

Insight 3

Although globally ranked 2<sup>nd</sup>, *Statistical Analysis & Data Mining* is the only Top Skill in which information appears for all 14 countries in the report.  
Seven out of 14 countries rank this skill 1<sup>st</sup> out of 10, the highest amount of top scores within this list.

I sorted the columns ascending and descending, and reviewed the skills by rank, finding that this skill possessed the highest instances of #1 in the report.

:: #Awesome : simple and clear insights are presented
