Storytelling with Data

Meets Specifications

Hi,
Congratulations, your project is now good to go. 🏆 👏 👏
Keep up the good work. 👍
Happy Learning and Be Safe. 😀 👍

Visual Storytelling with Data

✓	The visualization centers on a specific, clear finding in the data.

✓	The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization. Visualization does not add additional colors, shapes, or other design elements in an unnecessary way. Rather, each additional element should add to the insight being made.

Design

✓	Color choices must accurately reflect the data and be chosen with accessibility in mind. For example, values that span from negative to positive numbers should be encoded with a diverging palette. Also, the color palettes should work for colorblindness.
